

INTERNSHIP DOCUMENT

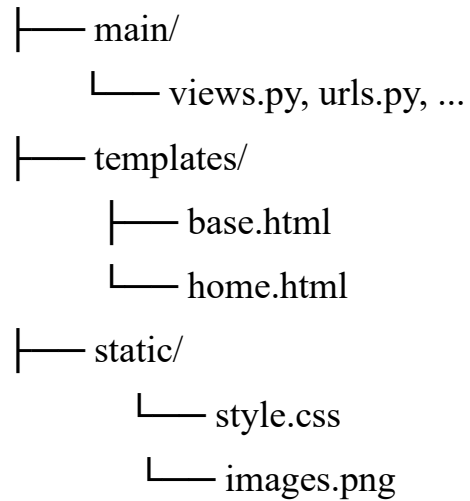

Project Title :	IPO Web App & REST API Development
Intern Name :	Thallapally Manaswi
Internship Duration :	1-Month
Mentor :	Yash Kale
Objective :	As part of my internship, I worked on building an IPO web application aimed at helping users easily view, track, and analyze upcoming IPOs. The main goal was to create a platform that provides key IPO details, market trends, and basic prediction features to assist users in making better investment decisions.

Technical Stack

Frontend :	HTML,React
Backend :	Django,Python
Database :	PostgreSQL
Hosting Platform:	Bluestock.in
Version Control:	Using GitHub to display project
Other Tools:	Postman

System Architecture

Header structure: mysite/

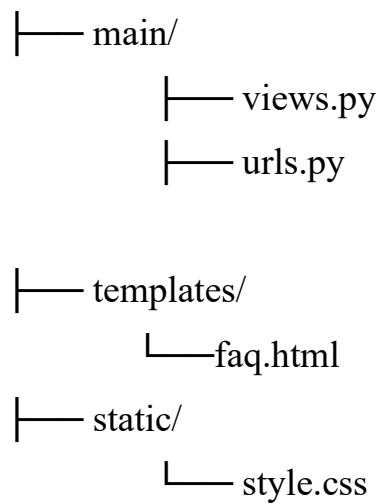

Footer Structure: mysite/

Setup of project(Ipo model): mysite/

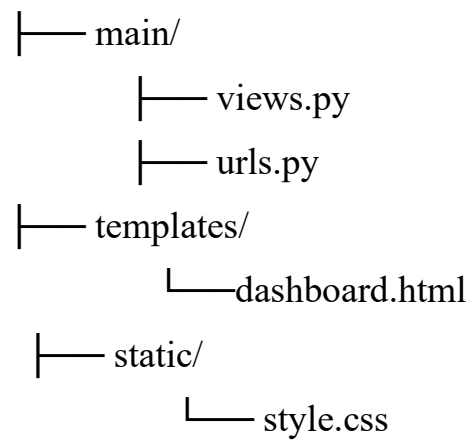

FAQ framework structure: mysite/

Login form structure : : mysite/

Dashboard Structure: mysite/

Dummy database design: templates/

ipolist.js

Deployment Prerequisites

System requirements :

Software Requirements :

Backend :

Python : 3.10+ (Recommended: 3.10 or 3.11)

Django REST Framework: 3.14+

Database : PostgreSQL

Frontend :

React.js : 18.x

Hardware Requirements :

For Development :

Component	Recommended Specs
RAM	: 8 GB (min), 16 GB preferred
Storage	: SSD with at least 10–15 GB free
OS	: Windows 10 / Ubuntu 20.04+ / macOS
Internet	: Stable connection

Deployment Steps

- Clone repository : Thallapally Manaswi (22r01a73c4)
- Install dependencies : Install the applications mentioned
- To check installations in bash give commands as
- For python - `python --version`
- For Django - `pip show django`
- Make sure your terminal is in the folder where `manage.py` exists.
- Setup .env file : Set up the environment while installing
- Run local server :
- bash : `django-admin startproject bluestock_project`
- `cd bluestock_project`
- `python manage.py startapp app`
- Application : upload the code
- install required packages
- run the code

Testing & Validation

Testing : API Postman testing

Apha testing
